

GOOD NEWS!!!

PROVEN BETTER SUBSTITUTE FOR PHOSPHOROUS CHEMICAL FERTILIZERS

FACT

Many agriculturists and users of Phosphorus fertilizers mistakenly measure %P or %P₂O₅ as an indication of effectiveness. The correct method according to Potash and Phosphate Institute is P solubility level (known as citric acid soluble or the effective part of P).

Organic Phosphate in Duofos has an extremely high citric solubility of 75%. Most common Rock Phosphate only has around 5-15% Phosphate solubility.

COMPUTATION FOR EFFECTIVE PHOSPHORUS

DUOFOS P ₂ O ₅ %	Solubility Average	Total P ₂ O ₅	Quick Available P ₂ O ₅	Slow Release P ₂ O ₅
22%	70%	220 kg/ton	154 kg/ton	66 kg/ton

BENEFITS OF USING ORGANIC DUOFOS

- Higher available Phosphorus (minimal P loss)
- Quick and slow release component
- Works in acid, neutral & alkaline soil
- Increases CATION EXCHANGE CAPACITY (CEC)
- Enhances microorganisms in the soil
- Improves water and nutrient holding capacity
- Adds soil organic matter
- Increase in soil micro fauna
